Personal Profile

I am currently a PhD candidate at the Theory of Quantum Materials and Solid State Quantum Technologies group at the Instituto de Ciencia de Materiales de Madrid (ICMM), CSIC, Madrid, Spain. My research focuses on the theoretical study of topological superconductors with hybrid materials, with special emphasis on full-shell Majorana nanowires. I am also interested in the study of the topological properties of superconducting materials and their applications in quantum computing.

I obtained my BSc in Physics from the Universidad Autónoma de Madrid in 2021, with a final grade 8.44/10. Then, I pursued in the same university my studies in the Master in Physics of Condensed Matter, which I completed in 2022 with a final grade 9.45/10. During my master's studies, I worked as a research assistant at the group that I would finally join in 2023 for my PhD studies.
